## INTRODUCTION

Traffic counts are conducted to collect information about the movement of people and vehicles across specific points along a given roadway. This information is often used as the basis for transportation planning studies, but has a wide variety of applications and uses. Traffic volumes can be used to evaluate the current performance characteristics of existing roadway segments, identify the need for additional transportation facilities to reduce existing congestion and gridlock, and as a gauge of the effectiveness of new businesses that rely on pass-by traffic (i.e. convenience stores, gas stations, and retail establishments). By far, the most important use of daily traffic count information is to identify trends in traffic volumes to assist in the development of seasonal adjustment factors and future growth rates. This information is used as the building blocks for future traffic projections used in transportation planning studies.

The Pioneer Valley Planning Commission (PVPC) collects daily traffic count information at sample locations across the 43 cities and towns in Hampden and Hampshire Counties under contract with the Massachusetts Department of Transportation (MassDOT). MassDOT requests specific traffic count locations each year as part of PVPC's 3C contract. Additional counts are conducted for member communities on an as requested basis (up to 2 free counts per calendar year) and for private businesses for a nominal fee. The PVPC also selects its own traffic count locations to supplement data collection activities required as part of ongoing corridor studies, the regional congestion management system, the regional pavement management system, and the regional transportation model. In addition, the PVPC houses shared traffic counts performed by a member community.

## DATA FORMAT

The following example shows the format in which the traffic count data is presented:

### Traffic Counts for South Hadley

Station	Facility	Location	Route	2015
9846	Lyman St.	N/O McKinley Ave.	33	7,623
2132	Woodbridge St.	S/O Silver St.	116	6,806
9866	Lathrop St.	S/O Brainard St.	**	4,775

A *station* number is assigned to each count location by the MassDOT and PVPC. Station numbers beginning with a 1, 2, or 3 are counts requested by and performed for MassDOT. Station numbers beginning with a 0 followed by a three digit MASSGIS town identification number are locations counted by a member community, and station numbers beginning with a 7, 8, or 9 are locations selected by the PVPC.

*Facility* identifies the street or roadway name on which the counter was placed, and *location* identifies the traffic counter's location in relation to the nearest cross street or political boundary. The *route* is the state or federally designated highway number of the facility, if applicable. Finally, the actual, unadjusted traffic count is listed by the *year(s)* in which it was performed. However, traffic counts performed by MassDOT are presented in this document as adjusted volumes. On two-way roadways, the traffic count volume consists of the total of both directions of travel.

In addition the following abbreviations are used:

N/O: North of	T.L.: Town Line
S/O: South of	C.L.: City Line
E/O: East of	S.L.: State Line
W/O: West of	BTW: between

## SEASONAL ADJUSTMENT FACTORS

Traffic counts conducted as part of this book were performed for a minimum of 48 hours on a weekday during the months of March - November. The traffic volumes presented represent seasonal average daily traffic (SADT) and have been left in their raw, unadjusted form. MassDOT develops statewide adjustment factors based on the functional classification of the roadway as well as urban versus rural area. These factors can be found on the MassDOT Data Management System site which is <http://mhd.ms2soft.com/tcds/tsearch.asp?loc=Mhd&mod=TCDS>. Due to the seasonal nature of PVPC's traffic counting program, the counts represented in this document can be expected to have some margin of error. The user is strongly encouraged to collect new traffic count data whenever possible for use in planning applications.

## REGIONAL GROWTH RATES

MassDOT currently collects data at nineteen permanent traffic count stations in the Pioneer Valley Region. These permanent count locations are listed in Table 1a.

Table 1a  
**MassDOT Permanent Count Stations in the Pioneer Valley**

Location ID	Community	Roadway	Location
26	Longmeadow	I-91	S/O Springfield City Line
33	Chicopee	I-391	S/O I-90 at Route 116
37	Chicopee	I-391	N/O I-90

Data availability is denoted by a shaded box in table 1b. The location IDs, as well as the data, are provided by the Massachusetts Department of Transportation on the MS2soft website. Descriptions of the count locations are shown in table 1a.

By examining the change in traffic volumes at the permanent count stations, information can be developed on the amount of growth occurring at specific locations throughout the region. Table 2 provides information on the percent change in traffic volumes at thirteen MassDOT interstate count stations locations. The locations have been grouped by the functional classification of the roadway and plotted on graphs in Figures 1 through 3. The functional classification of the roadway is an indication of the type and amount of traffic a roadway is expected to serve.

Table 2  
**Percent Change in Interstate Traffic Volumes**

<b>Community</b>	<b>Roadway</b>	<b>Location</b>	<b>Range for % Change</b>	<b>% Change</b>
Longmeadow	I-91	S/O Springfield City Line	2006-2016	8.04%
Northampton	I-91	N/O King Street Interchange	2006-2016	-11.47%
Northampton	I-91	BTW. Route 9 & Damon Road	2006-2016	4.74%
Northampton	I-91	BTW. Rts. 5 & 9	2006-2016	-1.32%
West Springfield	I-91	N/O Route 5	2006-2016	2.18%
Hatfield	I-91	N/O Chestnut Street	2006-2016	3.80%
Springfield	I-291	S/O Roosevelt Avenue	2006-2016	11.58%
Springfield	I-291	@Chicopee C.L.	2006-2016	22.59%
Springfield	I-291	W/O Saint James Avenue	2006-2016	15.24%
Chicopee	I-391	S/O I-90 at Route 116	2006-2016	7.99%
Chicopee	I-391	@ Connecticut River Bridge	2006-2016	12.61%
Chicopee	I-391	N/O I-90	2006-2014	15.83%
Chicopee	I-391	N/O I-91	2004-2014	6.48%

Figures 1a – 1c show the change in traffic volumes at thirteen MassDOT interstate count stations in the PVPC region. Traffic, for the most part, has held steady since 2008 at the above mentioned locations.

Figure 1a

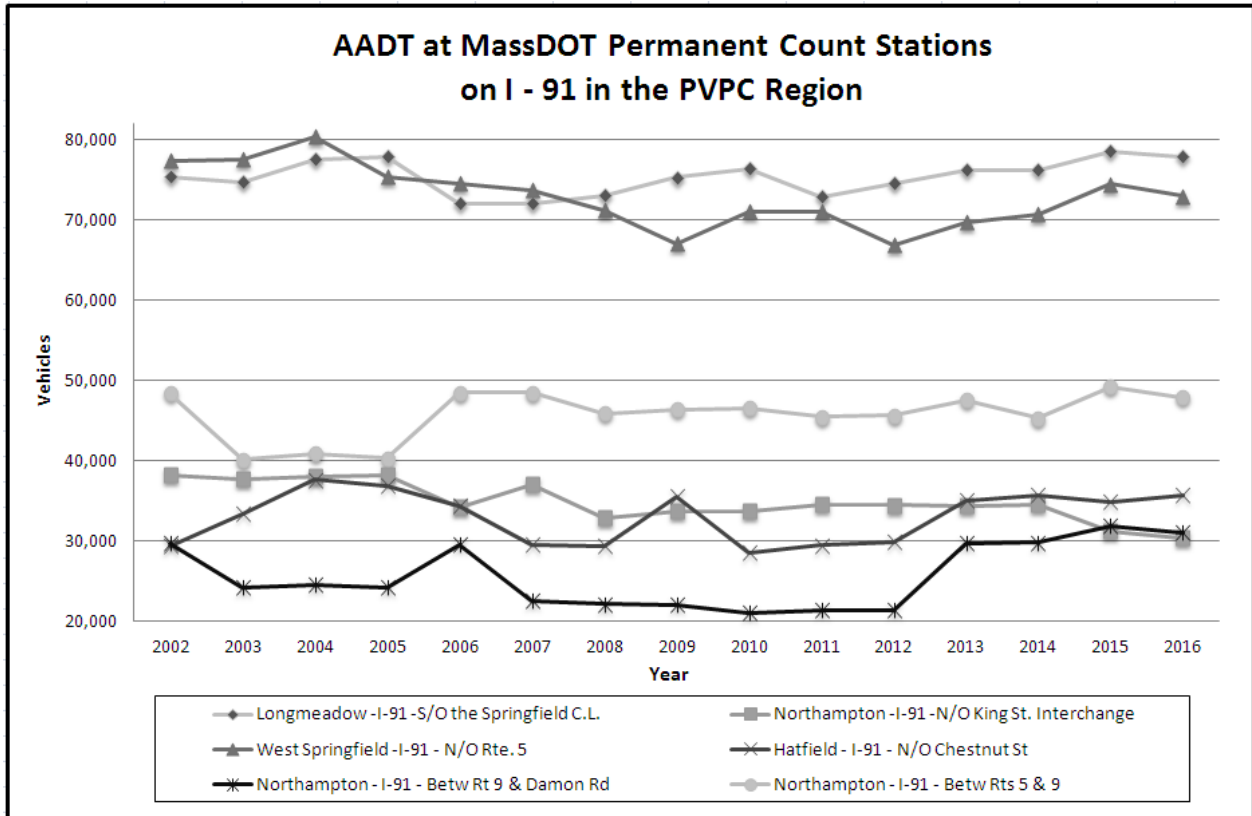

Figure 1b

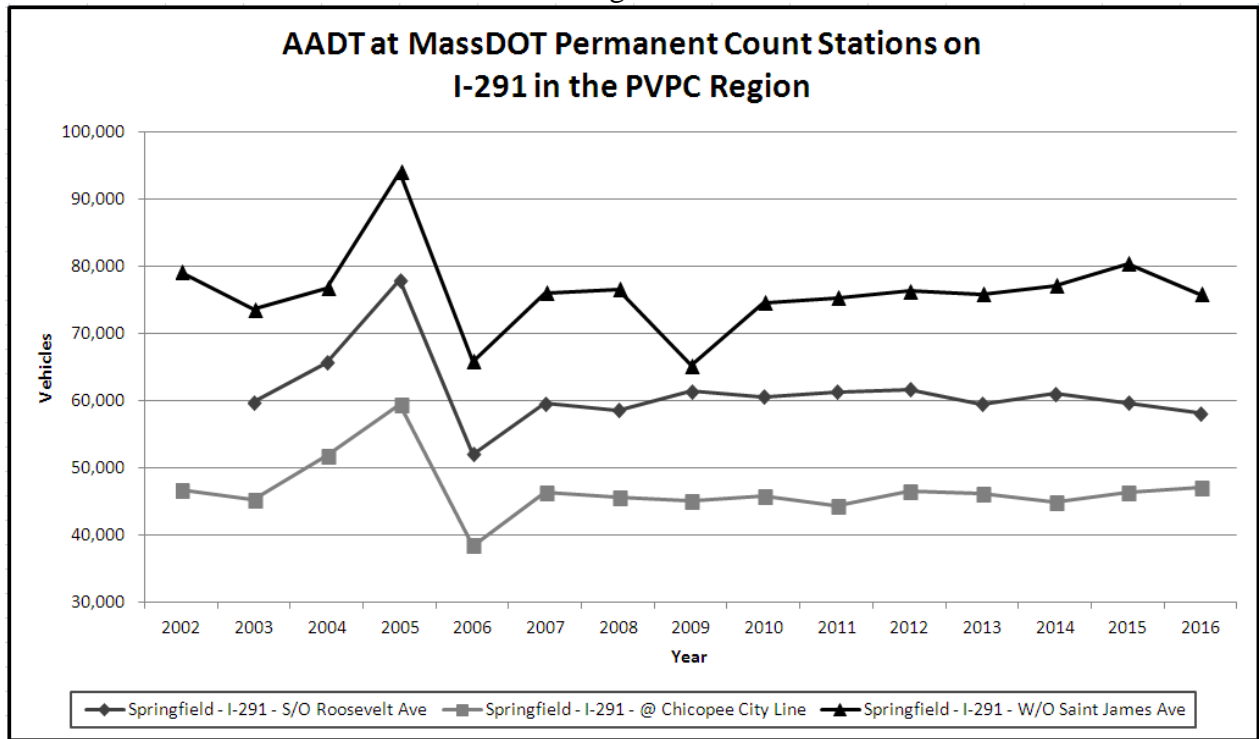

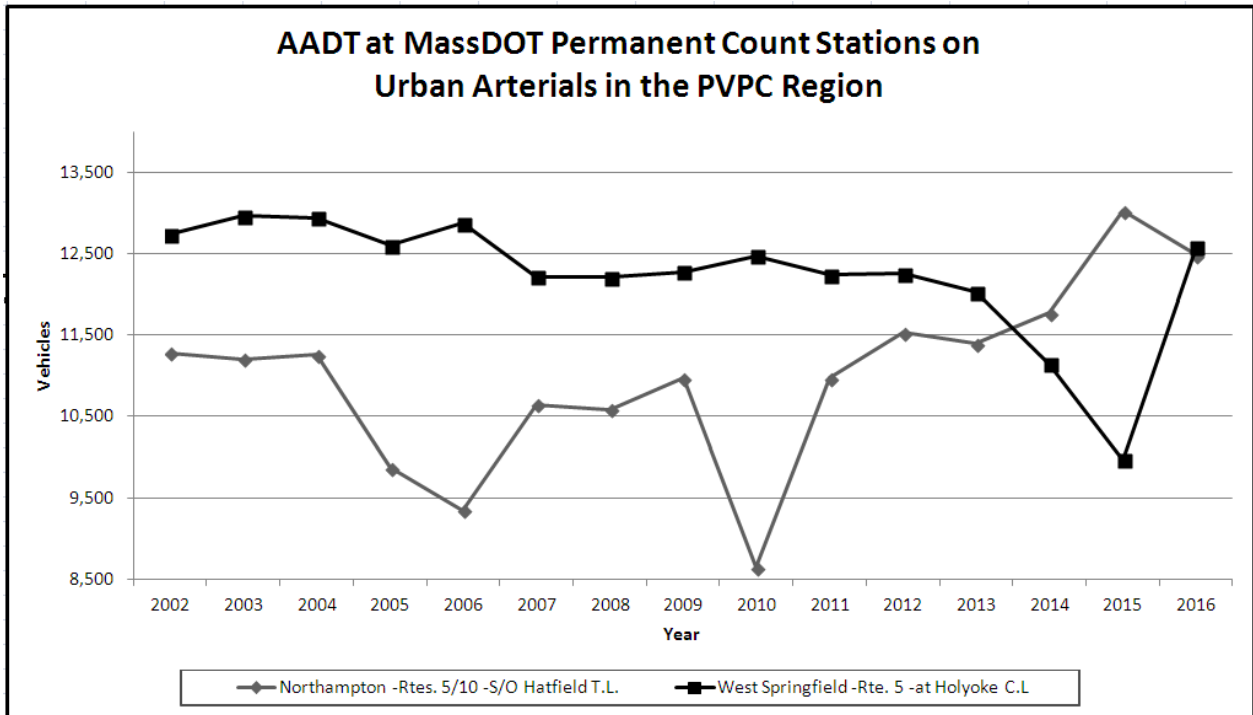

Figure 1c

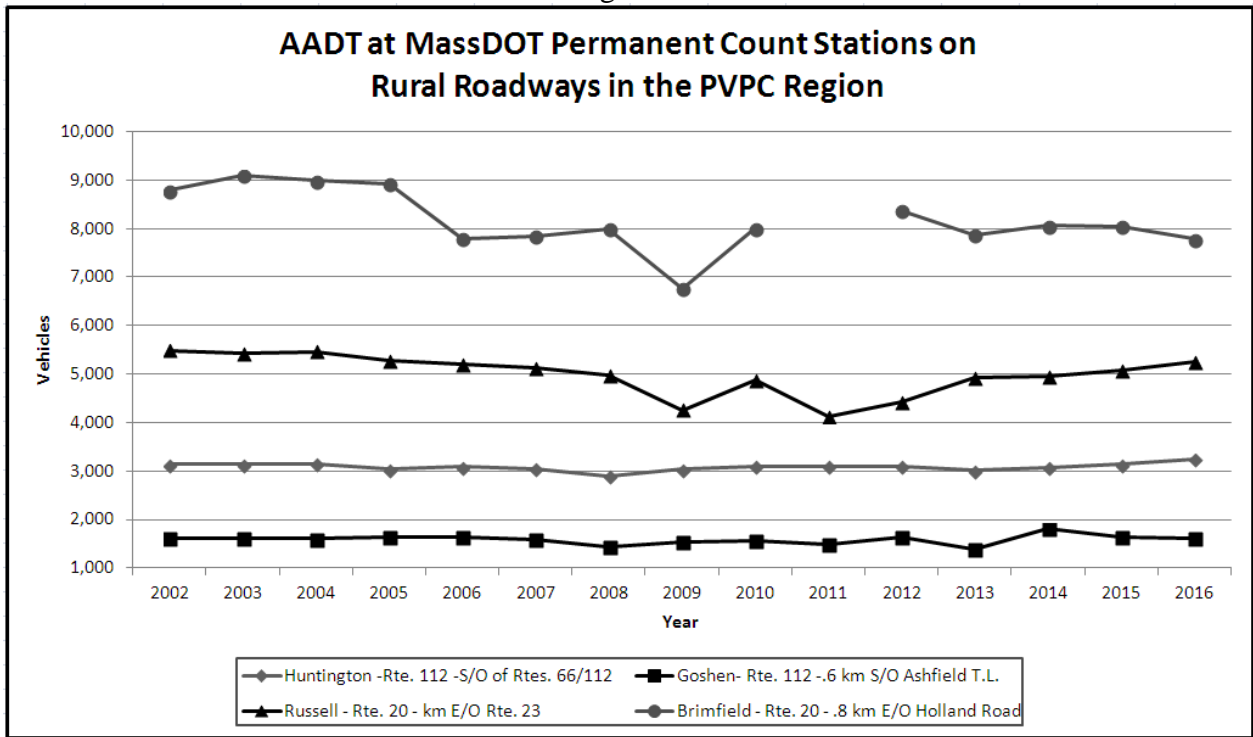

The two MassDOT urban arterial count stations shown in Figure 2 experienced different trends between 2010 and 2016. Traffic on Routes 5/10 south of the Hatfield Town Line in Northampton grew significantly from 2011 to 2015 whereas traffic growth on Route 5 at the Holyoke City Line in West Springfield decreased during the same time period. From 2013 to 2015, traffic trend is reversed at these locations. This data should be used with extreme caution due to the very small sample size and variation in trends at these two locations.

Figure 2

The annual change in traffic volumes at MassDOT permanent stations on rural roadways in the PVPC region is shown on Figure 3. Traffic on Route 112 South of Route 66/112 in Huntington has held steady from 2002 to 2016. Traffic on Route 112 0.6 km South of Ashfield Town Line in Goshen has also been holding steady and very little change has occurred between 2002 and 2016. For the most part, traffic on Route 20 in Russell held steady form 2002 to 2008. At this location, traffic decreased from 2008 to 2009 and from 2010 to 2011 but held steady from 2013 to 2015. Traffic volume on Route 20 in Brimfield decreased from 2005 to 2006 and from 2008 to 2009 and held steady from 2013 to 2015. Again this data should be used with extreme caution due to the small sample size of rural roadways for the PVPC region. The user is encouraged to collect additional traffic count information to verify trends whenever possible.

Figure 3

### NON-MOTORIZED COUNTS

PVPC collects bicycle and pedestrian volume counts for shared use paths, pedestrian counts on urban sidewalks and bicycle volumes on dedicated bike lanes. There are currently 82 miles of bike lanes, and shared use facilities in 15 communities in the Region. On shared use paths, a passive infra-red signal detector (TrafX Corp) with a data logger is used to tabulate and store volume counts. The device records a count each time an infra-red beam is interrupted by a passing cyclist or pedestrian and has the capacity to log millions of counts. The counting device operates within a temperature range of -40C (-40F) to +50C (122F). Pedestrian and Bicycle volume data is useful in predicting peak hours of use, seasonal fluctuations, and for engineering studies such as a signal warrant analysis. This data is used to improve existing facilities and assist in the design of future bikepath projects in the region in. In 2017, data was collected for the following shared use paths; Norwottuck Branch of the Mass Central Rail Trail in Hadley, the Easthampton Manhan Rail Trail, Agawam River Walk and Bikeway, East Longmeadow Redstone Rail Trail, Leeds section of the Northampton Bikeway Branch of the Mass Central. Pedestrian counts were also collected on urban sidewalks in Springfield and Northampton. In 2017 PVPC’s counting program also implemented an “on-road” bicycle count program to record the use of bike lanes throughout the Region. Using a new TRAX Cycles Plus automatic traffic data recorder staff are now able to accurately count mixed bicycle and automotive traffic. With the assistance of community representative to the Joint Transportation Committee, 5 bike lane locations were selected for 2017.

In additional to this data additional counts are available at the statewide searchable database available online: [http://bostonmpo.org/apps/bike\\_ped/bike\\_ped\\_query.cfm#](http://bostonmpo.org/apps/bike_ped/bike_ped_query.cfm#) Counts at intersections, bike lanes, and on shared use paths may be requested by local communities through the Pioneer Valley Planning Commission’s Local Technical Assistance (LTA) Program.

## AM & PM PEAK HOUR VOLUMES

Table 3 shows peak hour volumes by direction for each count location during the 2017 count season. The actual peak hour time is not shown, however it can be obtained by contacting the PVPC.

# AUTOMATIC TRAFFIC RECORDER DATA SHEET

Figure 4 illustrates an example of a raw traffic count. The figure shows volumes at every hour for each direction, including totals for each day, throughout the count period. Also shown is the week average, daily percent of the average by direction, daily peak hours, and the week average peak hours. Volumes in different formats are available by contacting the PVPC. Information on vehicle travel speed, classification, and gap size is available for selected locations as well.

## **TRAFFIC COUNT SERVICES**

This report contains a sampling of the data maintained by the Pioneer Valley Planning Commission. Additional statistics, as well as other traffic indicators such as peak hour, turning movement counts, travel speed studies, accident reports, vehicle classification counts, and pedestrian and bicycle counts are available by contacting the Pioneer Valley Planning Commission.

PVPC offers public and private organizations a reliable traffic counting service with state of the art monitoring equipment and traffic analysis capabilities. For more information, or to inquire about transportation, land use, demographic, mapping and economic data services and products, please contact:
